GILMS

The College Management System, often abbreviated as CMS, is software that helps the staff to direct online activities in our college.

The activities and management of the Library are also an integral part of this College Management System. The system dealing with the Library activities is referred as GILMS (*GIFT Integrated Library Management System*). The function of GILMS is to manage the activities of the Library through a computerized system.

The GILMS allows us to easily add new books, videos and Page sources. Apart from that Books and student maintenance modules are also a part in this system, this helps to keep track of the students using the library. The detailed description about the books in the College Library is also available for the staffs and students.

The best thing about this computerized system is hassle free record keeping of the book. There are separate modules which track all the Library activities starting from Book record keeping, Book issue date to both student and employee. The return dates are prefixed to 21 days and the fine thereafter is also auto calculated.

The librarian uses his/her CMS to access the Library module. All listed sub modules are available there. A book can be searched by typing in the book name or the Book Number. The book then can be issued to the student. Students are searched by typing the registration no. The book can further be issued on different basis like semester wise or on the 14-day cycle wise. There is no such restriction when a book is issued to an employee. However, when a employee leaves the Institute, he / she has to take the clearance from the library as well. All books available under his name will be displayed and has to be returned before taking the clearance.

Similarly, the study notes to be provided to the students are also available in here. The photocopy service is also available at the Library. If the students desire to get a hard copy of the notes, he can just photocopy it. The required charges which the student has to pay will automatically be added to his demands in his account book.

The student login in the library module shows all the books he/ she has taken and the requires dates of return and of all the photocopies he has done.

This computerized Library Module, GILMS helps the librarian to manage the library conveniently and effectively, compared to library systems which are not computerized.
